

Take a number, calculate the sum of its digits, and find the average of the digits

Example: n=12345

Ans:- num=int(input('enter a number: '))

count=0

sum=0

while(num>0):

    digit=num%10

    sum=sum+digit

    count=count+1

    num=num//10

avg=sum//count

print('average of digits is:',avg)
